

HGFR Antibody**Subcategory:** Rabbit Polyclonal Antibody**Cat. No.:** 200113**Unit:** 0.1 mg**Description:**

HGFR (MET), a tyrosine protein kinase, is the receptor for the hepatocyte growth factor and scatter factor. Activation of HGFR after rearrangement with the TPR gene produces an oncogenic protein c-MET. Defects in HGFR/MET are a cause of hepatocellular carcinoma and renal carcinoma.

Isotype: Rabbit Ig**Applications:** E, WB**Species Reactivity:** H, M, R, Mk, P, Rb, G**Format:** Each vial contains 0.1 mg IgG in 0.1 ml (1 mg/ml) of PBS pH7.4 with 0.09% sodium azide. Antibody was purified by Protein-G affinity chromatography.**Alternate Names:** Hepatocyte growth factor receptor; HGF receptor; Scatter factor receptor; SF receptor; HGF/SF receptor; Met proto-oncogene tyrosine kinase; c-Met**Accession No.:** P08581**Antigen:** KLH-conjugated synthetic peptide encompassing a sequence within the N-term region of human HGFR.**Application Notes:** E: 1:500-1:1,000; WB: 1:100-1:500**Storage:** Store at -20°C. Minimize freeze-thaw cycles.

Product is guaranteed one year from the date of shipment.
